

Maxwell, J.B., F. Kline and R.S. Bengtson. Correction to
note on linkage data for new ser mutants in NN #21.

We wish to correct an error that was made in reporting
the crosses used to study ser-5 (JBM-9), described in Max-
well et al. 1974 NN #21.

It was incorrectly stated that the crosses used were: Stock A; se, (JBM-9); cot-1 (C102t) was crossed to FGSC #190: a; sc (5801), trp-1 (10575) and to FGSC #116: a; ser-1 (H605).

The correct description of the crosses is: A sexual reisolate of se, (JBM-9) of genotype a; se, (JBM-9); cot-1 (C102t) was
crossed to FGSC #190: A; sc (5801), trp-1 (10575) and to FGSC #116: A; ser-1 (H605).

The source of the sexual reisolate of ser (JBM-9) was a cross of the original mutant to FGSC #333: a; cot-1 (C102t); inl (37401); ylo (Y30539y); nt (C86). - - - Department of Biology, California State University, Northridge, California 91324.
